

SMART* Assessments

Structured | Measurable | Aligned | Rigorous | Technology

EPIC SMART* assessments provide you with a detailed look at how your Oracle JD Edwards software is measuring up and whether an upgrade is in order.

We guide you through a multi-day program focusing on:

Executive and Organizational Review
In-Depth Business and Applications Analysis
Comprehensive Technology Architecture
Risk Assessment and Mitigation

The goal is to assist you in identifying and assessing areas for optimal operational and system performance including:

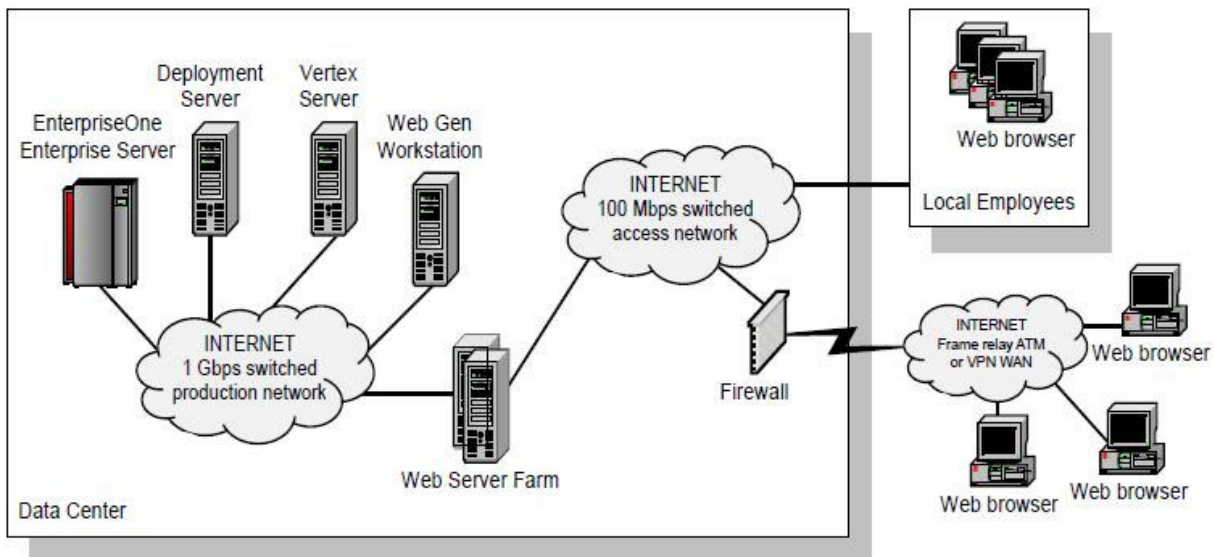

- Reviewing the “fit” between business and IT objectives
- Evaluating new functionality / modules
- Lowering your total cost of ownership (TCO)
- Improving system performance
- Analyzing custom modifications, costly 3rd party integrations & manual “workarounds”

Following the multi-day program, we compile your SMART assessment into a deliverable document specifically designed as a tool for use in the subsequent implementation/upgrade. This document includes:

- Gap analysis
- Upgrade approach and scope
- Project plan and schedule
- Project team – internal and consulting
- Hardware recommendations
- Key assumptions and risks
- Investment analysis

This program focuses on business drivers, critical processes and pain points using our EXPERTS with deep business & JD Edwards knowledge.

Let our experience guarantee your success!
